ELIMINATE AIRCRAFT PAINT EROSION

Protect Your Aircraft

Ice, rain, and airborne particles can cause serious surface and paint damage over time. PM Research's clear, adhesive polyurethane film provides a durable barrier against erosion while remaining nearly invisible after installation.

Each film is precision-molded to fit high-erosion areas on specific aircraft models, extending paint life, reducing repair costs, and minimizing downtime. With more than 40 years of manufacturing expertise, PM Research offers proven protection trusted across the aviation industry.

ASI is proud to have partnered with PM Research to offer our customers another premium quality product line.
